SABRINA GUARANI

As we are characterised by diversity and innovation, this time is no exception. Vapesol is presenting one of its latest developments, the Sabrina GUARANI, which is characterised by its truly minimalist design and zero drop. It was designed with our ancestors in mind and the benefits of walking barefoot, combined with the comfort of the contemporary world.

To achieve this similarity, we have used an elastomer that has allowed us to obtain a shape that completely adapts to the foot along with a unique flexibility that ensures all the physiological movements of the foot.

This is a highly ergonomic and environmentally friendly shoe, as the material used to make it is recyclable.

FEATURES

- A tread designed to increase slip resistance;
- Grid design, to drain water from the sides where the aim is to keep the foot dry;
- A piece was placed in the first interdigital space in order to protect it from any kind of injury, unlike the typical slipper;
- Heel prepared to prevent exaggerated joint movements, thus avoiding ankle injuries.
